Smart Home Automation

A Software Engineering Project Submitted by

Semester: Spring_23-24		Section:H	Group Number:08	
SN	Student Name	Student ID	Contribution (CO3+CO4)	Individual Marks
1	Umme Jannatul Fariha	21-45718-3		
2	Asir Foysal Al Mukit	21-45696-3		
3	Afsana Jahan Onu	21-45708-3		
4	Upanta Chowdhury	22-46736-1		
5	Emon Das	22-46599-1		

The project will be Evaluated for the following Course Outcomes

CO3: Select appropriate software engineering models, project management roles and their associated skills for the complex software engineering project and evaluate the sustainability of developed software, taking into consideration the societal and environmental aspects	Total Marks	
Appropriate Process Model Selection and Argumentation with Evidence	[5 Marks]	
Evidence of Argumentation regarding process model selection	[5Marks]	
Evaluate the sustainability of the developed software in terms of both society and the environment (Impact identification)	[5Marks]	
Submission, Defense, Completeness, Spelling, grammar and Organization of the Project report	[5Marks]	
CO4: Develop project management plan to manage software engineering projects following the principles of engineering management and economic decision process	Total Marks	
Develop the project plan, its components of the proposed software products	[5Marks]	
Identify all the activities/tasks related to project management and categorize them within the WBS structure. Perform detailed effort estimation correspond with the WBS and schedule the activities with resources	[5Marks]	
Identify all the potential risks in the specific project and prioritizing/categorizing those to overcome the risk factors.	[5Marks]	

Description of Student's Contribution in the Project work

<p>Student Name: Umme Jannatul Fariha Student ID: 21-45718-3 Contribution in Percentage (%): 20 <u>Contribution</u> <u>in the Project:</u> □ Contribution Description: UI Design, Testing, Activity scheduling, Cocomo</p> <p><u>Fariha</u> Signature of the Student</p>
<p>Student Name: Asir Foysal Al Mukit Student ID: 21-45696-3 Contribution in Percentage (%): 20 <u>Contribution</u> <u>in the Project:</u> □ Contribution Description: UI Design, Testing, Activity scheduling, Risk Management</p> <p><u>Asir</u> Signature of the Student</p>
<p>Student Name: Afsana Jahan Onu Student ID: 21-45708-3 Contribution in Percentage (%): 20 <u>Contribution</u> <u>in the Project:</u> □ Contribution Description: UI Design, Testing, Activity scheduling, Estimation</p> <p><u>Onu</u> Signature of the Student</p>
<p>Student Name: Upanta Chowdhury Student ID: 22-46736-1 Contribution in Percentage (%): 20 <u>Contribution</u> <u>in the Project:</u> □ Contribution Description: UI Design, Testing, Activity scheduling, Resource Allocation</p> <p><u>Upanta</u> Signature of the Student</p>
<p>Student Name: Emon Das Student ID: 22-46599-1 Contribution in Percentage (%): 20 <u>Contribution</u> <u>in the Project:</u> □ Contribution Description: UI Design, Testing, Activity scheduling, Estimation</p> <p><u>Emon</u> Signature of the Student</p>

Testing:

Project Name: SMART HOME AUTOMATION SYSTEM		Test Designed by: Upanta Chowdhury			
Test Case ID: FR_1		Test Designed date: 28/03/2024 Test Executed by:			
Test Priority (Low, Medium, High): Medium		Test Execution date:			
Module Name: Registration Session		Gender, password ,Confirm Password.			
Test Title: verify Registration with Name, username, Email address,					
Description: Test website Registration page					
Precondition (If any): User must have valid Email Address and fill up all the criteria of Username and Password .					
Test Steps		Test Data	Expected Actual	Result	Status (Pass/Fail)
1.Go to the website 2.Click Signup 3.Enter Name 4.Enter Username 5.Enter Email address 6.Select Gender 7.Enter Password 8.Enter Confirm Password. 9.Click submit Post User is validated with database successfully logged in the database.		Name: Wilson Gomez Username: Wilson_01 Email Address:wilson48@gmail.com Gender:Male Password: qwer1234 Confirm Password: qwer1234	User should successfull y register into the application		

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_2			Test Designed date:	
Test Priority (Low, Medium, High): Medium			Test Executed by:	
Module Name: AC control			Test Execution date:	
Test Title: Air Conditioner (AC) Control Functionality Test				
Description: This test verifies the functionality of controlling the air conditioner (AC) in the Smart Home Automation System.				
Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
<div>1. Turn on the AC using the designated control.</div> <div>2. Set the desired temperature.</div> <div>3. Verify if the AC is turned on and the temperature is set correctly.</div> <div>4. Turn off the AC using the designated control.</div> <div>5. Verify if the AC is turned off.</div>	<div>AC control actions</div> <div>Desired temperature setting</div>	<div>1.The AC should turn on successfully.</div> <div>2.The desired temperature should be set.</div> <div>3.The AC should start cooling to the desired temperature.</div> <div>4.The AC should turn off successfully.</div> <div>5.The AC should stop cooling.</div>		
Post Condition: The AC control functions properly, and the AC state corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_3 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: TV control Test Title: Television (TV) Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of controlling the television (TV) in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
<div>1. Turn on the TV using the designated control.</div> <div>2. Change the channel.</div> <div>3. Adjust the volume.</div> <div>4. Turn off the TV using the designated control.</div>	<div>• TV control actions</div> <div>• Channel number</div> <div>• Volume level</div>	<div>1.The TV should turn on successfully.</div> <div>2.The channel should change according to the input.</div> <div>3.The volume should adjust to the specified level.</div> <div>4.The TV should turn off successfully.</div>		
Post Condition: The TV control functions properly, and the TV state corresponds to the actions performed				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_4 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: Camera Control Test Title: Camera Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of controlling the camera in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Access the camera control interface. 2. Pan the camera left and right. 3. Tilt the camera up and down. 4. Zoom in and out using the camera controls.	Camera control actions	1.The camera control interface should be accessible. 2.The camera should pan left and right smoothly. 3.The camera should tilt up and down smoothly. 4.The camera should zoom in and out smoothly.		
Post Condition: The camera control functions properly, and the camera movements correspond to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_5 Test Priority (Low, Medium, High): Medium			Test Designed date:04/04/2024 Test Executed by:	
Module Name: Garage Service And Support Test Title: Garage Door Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of controlling the garage door in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Open the garage door using the designated control. 2. Verify if the garage door is opened completely. 3. Close the garage door using the designated control. 4. Verify if the garage door is closed completely.	Garage door control actions	1.The garage door should open successfully 2.The garage door should be fully open. 3.The garage door should close successfully 4.The garage door should be fully closed.		
Post Condition: The garage door control functions properly, and the garage door state corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM		Test Designed by: Emon Das		
Test Case ID: FR_6		Test Designed date: 28/03/2024		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
Module Name: Login Session		Test Execution date:		
Test Title: verify login with valid username password				
Description: Test website login page				
Precondition (If any): User must have valid username and password				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1.Go to the website 2.Enter username 3.Enter password 4.Click submit	Username: Wilson_01 Password: qwer1234	User should login into the application		
post condition: User is validated with database and successfully login to account. The account session details are logged in the database.				

Project Name: SMART HOME AUTOMATION SYSTEM		Test Designed by: ASIR FOYSAL		
Test Case ID: FR_7		Test Designed date: 28/03/2024 Test Executed by:		
Test Priority (Low, Medium, High): High		Test Execution date:		
Module Name: Test Security and Safety				
Test Title: Verify Security Door Lock.				
Description: Test Security System				
Precondition (If any): User must have a valid account and is authenticated within the smart home automation system and the system installed .				
Test Steps	Test Data	Expected Result	Actual Result	Status (Pass/Fail)
1. Login to the system. 2. Go to the Security Section. 3. Check the password for the Doorlock ,if Credentials match ,the door will unlock.	Doorlock Pin:- 3949596	User should successfully open the door with right pin		
Post condition: Door lock is working properly.				

Project Name: SMART HOME AUTOMATION SYSTEM		Test Designed by: Fariha			
Test Case ID: FR_8		Test Designed date: 03./04/2024			
Test Priority (Low, Medium, High): Medium		Test Executed by:			
Module Name: Logout Session		Test Execution date:			
Test Title: verify logout button					
Description: Test website logout button					
Precondition (If any): Ensure that the user is logged in and has an active session.					
Test Steps		Test Data	Expected Actual	Results (Pass/Fail) Results	Status
1. Go to the website 2. Identify the logout option 3. Click logout 4. Now,it will take you to the login page		Test logout confirmation prompts with different confirmation responses (e.g., "Yes," "No").	User should Logout from the application		
Post Condition: User is successfully logged out from the application.					

Project Name: SMART HOME AUTOMATION SYSTEM	Test Designed by: Fariha
Test Case ID: FR_9	Test Designed date: 03./04/2024
Test Priority (Low, Medium, High): Medium	Test Executed by:
Module Name: Notification Session	Test Execution date:
Test Title: verify notification button	
Description: To verify that the notification button functions correctly and provides users with timely and relevant notifications.	
Precondition (If any): Ensure that the user is logged in and has an active session.	

Test Steps	Test Data	Expected Result	Actual Results	Status (Pass/Fail)
<div>1. Go to the website</div> <div>2. Verify that the notification button is visible .</div> <div>3. Click on the notification button and confirm that the notification panel opens.</div> <div>4. Verify the display of notification details (e.g., message, timestamp).</div> <div>5. Click on a notification and verify that it opens the corresponding content or action.</div> <div>6. Test marking notifications as read and unread.</div>	<div>Click on the notification button.</div> <div>Expected Result:</div> <div>Click on a notification within the notification panel.</div> <div>Mark a notification as read or unread.</div>	<div>The notification panel should open smoothly.</div> <div>The corresponding content or action associated with the clicked notification should open.</div> <div>The notification should be visually updated to reflect its read/ unread status .</div>		

Post Condition: User is successfully access all the notifications.
--

Project Name: SMART HOME AUTOMATION SYSTEM		Test Designed by: Fariha		
Test Case ID: FR_10		Test Designed date: 03./04/2024		
Test Priority (Low, Medium, High): Medium		Test Executed by:		
		Test Execution date:		
Test Title: verify dishwasher button				
Description: To verify that the dishwasher button functions correctly and initiates the dishwasher cycle as intended.				
Precondition (If any): Ensure that the user is logged in and has access to kitchen.				
Test Steps	Test Data	Expected Actual	Results	Status (Pass/Fail)
1.Go to kitchen homepage. 2.Press the dishwasher button. 3.Toggle the dishwasher button.	Press the dishwasher button. Toggle the dishwasher button.	The dishwasher button should initiate the dishwasher cycle upon pressing.	Results	
Post Condition: User can successfully access dishwasher Button anytime.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Fariha	
Test Case ID: FR_11			Test Designed date: 03./04/2024	
Test Priority (Low, Medium, High): Medium			Test Executed by:	
Module Name: coffee maker Session			Test Execution date:	
Test Title: verify coffee maker button				
Description: To verify that the coffee maker functions correctly.				
Precondition (If any): Ensure that the user is logged in and has access to kitchen.				
Test Steps	Test Data	Expected Result	Actual Results	Status (Pass/Fail)
1.Go to kitchen homepage. 2.Press the coffee maker button. 3.Press the oven button. 4.Select the mode you want to use.	Press the coffee maker button. Press the oven button. Select any mode or set timer.	The coffee maker button should initiate the coffee making and stopped automatically after making the coffee. The oven button should initiate process upon pressing	Results	
Post Condition: User can successfully access coffee maker Button anytime.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Fariha	
Test Case ID: FR_12 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: oven Session Test Title: verify oven button			Test Execution date:	
Description: To verify that the oven button functions correctly. Precondition (If any): Ensure that the user is logged in and has access to kitchen				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1.Go to kitchen homepage. 2. Press the oven button. 3. Select the mode you want to use.	Press the oven button. Select any mode or set timer.	The oven button should initiate process upon pressing.		
Post Condition: User can successfully access oven Button anytime.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Fariha	
Test Case ID: FR_13 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: toaster Session Test Title: verify toaster button			Test Execution date:	
Description: To verify that the toaster functions correctly. Precondition (If any): Ensure that the user is logged in and has access to kitchen.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to kitchen homepage. 2. Press the toaster button	Press the toaster button.	The toaster button should initiate the making and stopped automatically after making the toast.		
Post Condition: User can successfully access toaster Button anytime.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Fariha	
Test Case ID: FR_14 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: Exhaust fan Session Test Title: verify exhaust fan functionality			Test Execution date:	
Description: Test exhaust fan functionality and its work. Precondition (If any): User must have logged into the session				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1.Go to the bathroom page. 2. Turn on the exhaust fan. 3. Turn off the exhaust fan.	Turn on the exhaust fan. Turn off the exhaust fan.	The fan is turn on,off successfully	As expected	Passed
Post Condition: The exhaust fan control is working successfully.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_15 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: Test setting button Test Title: Setting Button Functionality Test			Test Execution date:	
Description: This test aims to verify the functionality of the setting button in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1.Click on the setting button. 2.Verify that the settings menu opens. 3.Navigate through the settings options (if any). 4.Make changes (if applicable) and save settings.	User interaction with the setting button and navigation through the settings menu	1.The setting options menu should be displayed. 2.The setting options should include options for configuring the system. 3.The selected setting option should be editable. 4.The changes made should be saved successfully	As expected	Passed
Post Condition: The setting changes are saved and reflected in the Smart Home Automation System.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_16 Test Priority (Low, Medium, High): Medium			Test Designed date: Test Executed by:	
Module Name: Light on, off Test Title: Light Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of turning the light on and off in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
<div>1. Turn on the light using the designated control.</div> <div>2. Verify if the light is turned on.</div> <div>3. Turn off the light using the designated control.</div> <div>4. Verify if the light is turned off.</div>	Light control actions	<div>1.The light should turn on successfully.</div> <div>2.The light should be illuminated.</div> <div>3.The light should turn off successfully</div> <div>4.The light should not be illuminated</div>		
Post Condition: The light control functions properly, and the light state corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_17 Test Priority (Low, Medium, High): Medium			Test Designed by: Test designed date: 02/04/2024 Test Executed by:	
Module Name: Fan on, off Test Title: Fan Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of turning the fan on and off in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
<div>1. Turn on the fan using the designated control.</div> <div>2. Verify if the fan is turned on.</div> <div>3. Turn off the fan using the designated control.</div> <div>4. Verify if the fan is turned off.</div>	Fan control actions	<div>1. The fan should turn on successfully.</div> <div>2. The fan should start spinning.</div> <div>3. The fan should turn off successfully.</div> <div>4. The fan should stop spinning.</div>		
Post Condition: The fan control functions properly, and the fan state corresponds to the actions performed.				

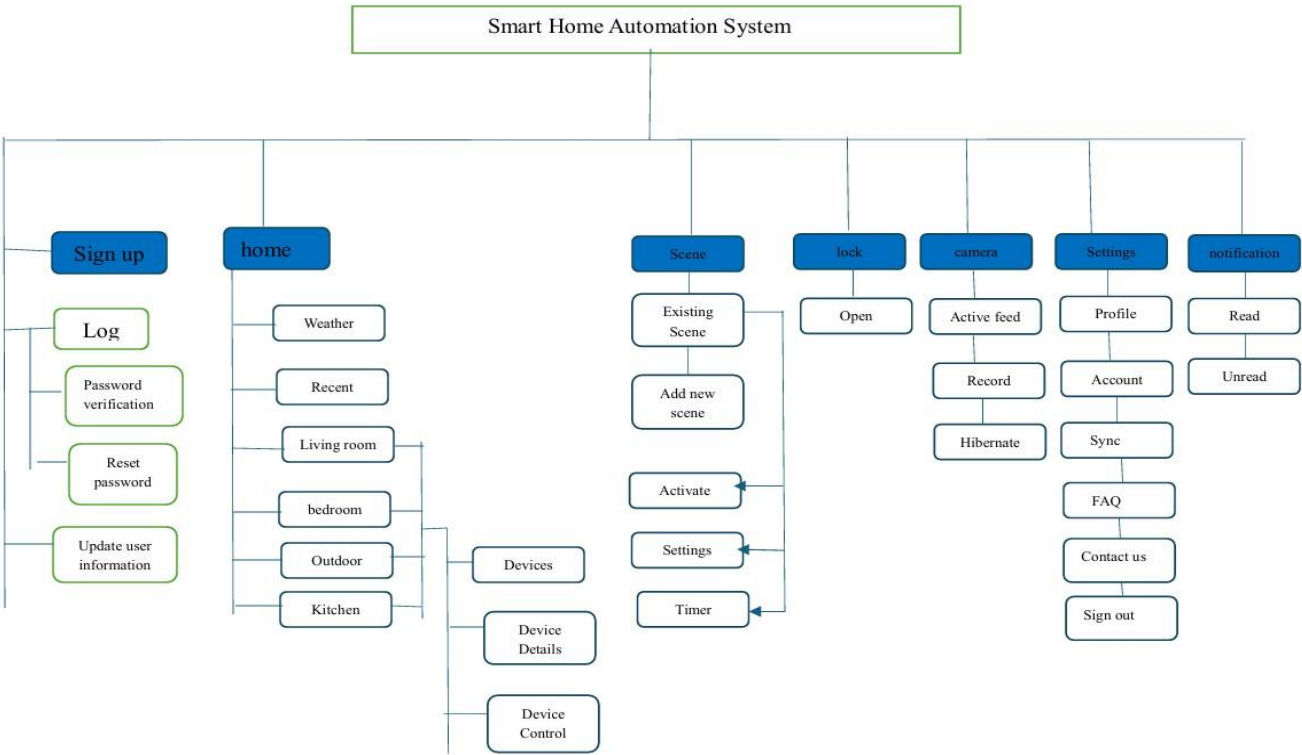

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Afsana Jahan Onu	
Test Case ID: FR_18 Test Priority (Low, Medium, High): Medium			Test Designed date:04.04.2024 Test Executed by:	
Module Name: flush on Test Title: flush Functionality Test			Test Execution date:	
Description: This test verifies the functionality of turning the flush on in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Turn on the flush using the designated control. 2. Verify if the flush is turned on.	Flush control actions	5. The flush should turn on successfully. 6. And it should automatically turn off after its work.		
Post Condition: The flush control functions properly, and corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: upanta	
Test Case ID: FR_19 Test Priority (Low, Medium, High): Medium			Test Designed date:04.04.2024 Test Executed by:	
Module Name: voiceover session Test Title: voice Functionality Test			Test Execution date:	
Description: This test verifies the functionality of voice in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and it gives permission to use the microphone.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
3. Turn on the voice option using the designated control. 4. Verify if the voice is turned on.	Give any voice commands.	7. The voice should turn on successfully. 8. And it should automatical ly do the thing that the user asked for.		
Post Condition: The voice functions properly, and corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: emon	
Test Case ID: FR_20 Test Priority (Low, Medium, High): Medium			Test Designed date:04.04.2024 Test Executed by:	
Module Name: water mode/speed session Test Title: water mode/speed Functionality Test			Test Execution date:	
Description: This test verifies the functionality of water mode in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1.Click on the mode option using the designated control. 2.Select the mode/speed of the water.	Water mode control actions	1.The water mode/speed should turn on successfully.		
Post Condition: The water mode/speed control functions properly, and corresponds to the actions performed.				

Project Name: SMART HOME AUTOMATION SYSTEM			Test Designed by: Asir	
Test Case ID: FR_21 Test Priority (Low, Medium, High): Medium			Test designed date: 02/04/2024 Test Executed by:	
Module Name: Table lamp on, off Test Title: Table lamp Control Functionality Test			Test Execution date:	
Description: This test verifies the functionality of turning the table lamp on and off in the Smart Home Automation System. Precondition (If any): The Smart Home Automation System is installed and operational.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
5. Turn on the table lamp using the designated control. 6. Verify if the table lamp is turned on. 7. Turn off the table lamp using the designated control. 8. Verify if the table lamp	table lamp control actions	5. The table lamp should turn on successfully 6. The table lamp should start spinning.		
is turned off.		7. The table lamp should turn off successfully 8. The table lamp should stop spinning.		
Post Condition: The table lamp control functions properly, and the fan state corresponds to the actions performed.

Table: Progress Data Of Project Execution

Tasks	Planned Effort	Actual Effort
1	15	17
2	15	15
3	21	14
4	8	13
5	8	25
6	11	24
7	12	28
8	16	28
9	13	13
10	15	14
11	26	8
12	25	8
Total	185	207

Total Task= 12; Effort Estimation=440 person0-day

BAC=440 person-day

BCWP=148

BCWS=185

ACWP=142

$SPI = BCWP \div BCWS = 0.8$

$SV = BCWP - BCWS = -37$

$CPI = BCWP \div ACWP = 1.04$

$CV = BCWP - ACWP = 6$

% schedule for completion= $BCWS \div BAC = 42.04\%$ [% of work schedule to be done at this time]

%complete= $BCWP \div BAC = 33.63\%$ [% of work complete this time]

COCOMO (Construction Cost Model)

It's a semi detached project.

P=1.12

T=0.35

Coefficient=3

SLOC:20000

$PM = \text{Effort} = \text{Coefficient} * (\text{SLOC} / 1000)^P$

$$= 3 * \left(\frac{20000}{1000} \right)^{1.12}$$

$$= 85.955$$

$$\begin{aligned}
 \text{DM} &= \text{Development time} = 2.50 * (\text{PM})^T \\
 &= 2.50 * (85.955)^{0.35} \\
 &= 11.883 \text{ week days} \\
 \text{Required number of people} &= \text{ST} = \text{PM} / \text{DM} \\
 &= 85.955 / 11.883 \\
 &= 7.233
 \end{aligned}$$

Risk Management:

Risks	Category	Probability	Impact	Risk Reduction Techniques
Size estimate may be low	PS	70%	2	Simulation, prototyping, tuning
Larger number of user than planned	PS	20%	3	Scalability planning, Load testing, Performance tuning
Less reuse than planned	PS	60%	2	Code modularization, Component reuse, Design patterns
Delivery deadline will be tightened	BU	40%	2	Incremental Development, Resource Optimization
Technology will not meet expectations	TE	20%	1	Proof of Concept, Prototyping, Technology Evaluation
Lack of training on tools	DE	80%	3	Training, Knowledge Transfer, Documentation
Staff inexperienced	ST	30%	2	Training, Knowledge Transfer, Mentorship
Staff turnover will be high	ST	60%	2	Friendly environment, Knowledge Transfer, Mentorship, Team Building, Flexibility
System Overload	PS	40%	3	Load Testing, Performance Tuning, Capacity Planning
User Resistance	BU	50%	3	User Involvement, Change Management, Communication
Performance Issues	TE	30%	2	Performance Tuning, Model Evaluation
Security Vulnerabilities	TE	20%	2	Security Audits, Penetration Testing, Encryption
Funding Shortfall	CU	30%	1	Cost Estimation, Budget Management, Funding Diversification
Integration Challenges	TE	30%	2	Integration Testing, Interoperability Testing, API Design
Real Time Performance Problems	TE	50%	2	Performance Tuning, Load Testing, Caching
Sensor Failure	TE	4s0%	2	Failover Mechanism, Regular Maintenance
